

BROW CODE

EYEBROW TINT

FAQS

WHAT IS TINT?

Eye-brow tinting is the process of applying semi permanent dye to enhance, shape, and define your brows. Our richly pigmented tint range stains the skin as well as the brow hairs.

HOW LONG DOES TINT LAST?

Brow Code Tint lasts up to 7 days on the skin and up to 3 to 4 weeks on the brow hairs. Please follow all instructions and aftercare correctly to achieve this longevity.

WHAT IS THE CORRECT AFTERCARE?

By following the correct aftercare, you can achieve longer-lasting tint results. We've compiled a list of our go-to aftercare tips, which should be followed for 24 to 48 hours post-treatment:

- Avoid using makeup and facial cleansers around the brow area.
- Avoid prolonged exposure to direct sunlight, the use of sunbeds, saunas, steam rooms, and swimming pools.
- Avoid exfoliating and using anti-aging products around the brow area.
- Avoid using any self-tanning products on the face for around two-three days on either side of the treatment.
- Avoid the temptation to over-touch the brow area after treatment. Touching with hands/fingers can lead to oils entering opening pores and clogging them.

CAN I DO LAMINATION AND TINT IN THE SAME SERVICE?

Yes, you can pair lamination and tint in the same service. We recommend applying tint in between steps 2 and 3 of the lamination process. Alternatively, you can tint the brows 24 hours before or after completing the lamination treatment.

IS TINTING SAFE FOR PREGNANT AND BREASTFEEDING WOMEN?

Yes, our tint is safe for pregnant and breastfeeding women. However, we always recommend consulting with your healthcare professional first.
